PROGRESS

Cracking into Hack the Box

3 Modules

Easy

To be successful in any technical information security role, we must have a broad understanding of specialized tools, tactics, and terminology. This path introduces core concepts necessary for anyone interested in a hands-on technical infosec role. The modules also provide the essential prerequisite knowledge for joining the main Hack The Box platform, progressing through Starting Point through easy-rated retired machines, and solving "live" machines with no walkthrough. It also includes helpful information about staying organized, navigating the HTB platforms, common pitfalls, and selecting a penetration testing distribution. Students will complete their first box during this path with a guided walkthrough and be challenged to complete a box on their own by applying the knowledge learned in the Getting Started module.

100% Completed

SOC Analyst

15 Modules

Medium

The SOC Analyst Job Role Path is for newcomers to information security who aspire to become professional SOC analysts. This path covers core security monitoring and security analysis concepts and provides a deep understanding of the specialized tools, attack tactics, and methodology used by adversaries. Armed with the necessary theoretical background and multiple practical exercises, students will go through all security analysis stages, from traffic analysis and SIEM monitoring to DFIR activities and reporting. Upon completing this job role path, you will have obtained the practical skills and mindset necessary to monitor enterprise-level infrastructure and detect intrusions at an intermediate level. The SOC Analyst Prerequisites skill path can be considered prerequisite knowledge to be successful while working through this job role path.

100% Completed

CompTIA Security+ Preparation

10 Modules Medium

The CompTIA Security+ Preparation Path is tailored to guide learners through the essential stages of cybersecurity knowledge required for certification. This learning path provides a structured tutorial approach, encompassing a variety of topics from risk management to threat analysis and security protocols. Through expertly crafted content and real-world scenario-based exercises, you will build a robust foundation in cybersecurity principles and practices. This path not only prepares you for the CompTIA Security+ exam but also equips you with the practical skills needed in today's cybersecurity landscape.

100% Completed

MODULE

PROGRESS

Learning Process

20 Sections Fundamental General

The learning process is one of the essential and most important components that is often overlooked. This module does not teach you techniques to learn but describes the process of learning adapted to the field of information security. You will learn to understand how and when we learn best and increase and improve your learning efficiency greatly.

100% Completed

Intro to Academy

8 Sections Fundamental General

Your first stop in Hack The Box Academy to become acquainted with the platform, its features, and its learning process.

100% Completed

Linux Fundamentals

30 Sections Fundamental General

This module covers the fundamentals required to work comfortably with the Linux operating system and shell.

100% Completed

Network Enumeration with Nmap

12 Sections

Easy

Offensive

Nmap is one of the most used networking mapping and discovery tools because of its accurate results and efficiency. The tool is widely used by both offensive and defensive security practitioners. This module covers fundamentals that will be needed to use the Nmap tool for performing effective network enumeration.

100% Completed

SQL Injection Fundamentals

17 Sections

Medium

Offensive

Databases are an important part of web application infrastructure and SQL (Structured Query Language) to store, retrieve, and manipulate information stored in them. SQL injection is a code injection technique used to take advantage of coding vulnerabilities and inject SQL queries via an application to bypass authentication, retrieve data from the back-end database, or achieve code execution on the underlying server.

100% Completed

Introduction to Networking

21 Sections

Fundamental

General

As an information security professional, a firm grasp of networking fundamentals and the required components is necessary. Without a strong foundation in networking, it will be tough to progress in any area of information security. Understanding how a network is structured and how the communication between the individual hosts and servers takes place using the various protocols allows us to understand the entire network structure and its network traffic in detail and how different communication standards are handled. This knowledge is essential to create our tools and to interact with the protocols.

100% Completed

Web Requests

8 Sections

Fundamental

General

This module introduces the topic of HTTP web requests and how different web applications utilize them to communicate with their backends.

100% Completed

JavaScript Deobfuscation

11 Sections

Easy

Defensive

This module will take you step-by-step through the fundamentals of JavaScript Deobfuscation until you can deobfuscate basic JavaScript code and understand its purpose.

100% Completed

Windows Fundamentals

15 Sections

Fundamental

General

This module covers the fundamentals required to work comfortably with the Windows operating system.

93.33% Completed

Attacking Web Applications with Ffuf

13 Sections

Easy

Offensive

This module covers the fundamental enumeration skills of web fuzzing and directory brute forcing using the Ffuf tool. The techniques learned in this module will help us in locating hidden pages, directories, and parameters when targeting web applications.

100% Completed

Login Brute Forcing

13 Sections

Easy

Offensive

The module contains an exploration of brute-forcing techniques, including the use of tools like Hydra and Medusa, and the importance of strong password practices. It covers various attack scenarios, such as targeting SSH, FTP, and web login forms.

100% Completed

SQLMap Essentials

11 Sections

Easy

Offensive

The SQLMap Essentials module will teach you the basics of using SQLMap to discover various types of SQL Injection vulnerabilities, all the way to the advanced enumeration of databases to retrieve all data of interest.

100% Completed

Introduction to Active Directory

16 Sections Fundamental General

Active Directory (AD) is present in the majority of corporate environments. Due to its many features and complexity, it presents a vast attack surface. To be successful as penetration testers and information security professionals, we must have a firm understanding of Active Directory fundamentals, AD structures, functionality, common AD flaws, misconfigurations, and defensive measures.

100% Completed

Introduction to Web Applications

17 Sections Fundamental General

In the Introduction to Web Applications module, you will learn all of the basics of how web applications work and begin to look at them from an information security perspective.

100% Completed

Getting Started

23 Sections Fundamental Offensive

This module covers the fundamentals of penetration testing and an introduction to Hack The Box.

100% Completed

Broken Authentication

14 Sections Medium Offensive

Authentication is probably the most straightforward and prevalent measure used to secure access to resources, and it's the first line of defense against unauthorized access. Broken authentication is listed as #7 on the 2021 OWASP Top 10 Web Application Security Risks, falling under the broader category of Identification and Authentication failures. A vulnerability or misconfiguration at the authentication stage can impact an application's overall security.

57.14% Completed

Intro to Network Traffic Analysis

15 Sections Medium General

Network traffic analysis is used by security teams to monitor network activity and look for anomalies that could indicate security and operational issues. Offensive security practitioners can use network traffic analysis to search for sensitive data such as credentials, hidden applications, reachable network segments, or other potentially sensitive information "on the wire." Network traffic analysis has many uses for attackers and defenders alike.

100% Completed

Setting Up

22 Sections

Fundamental

General

This module covers topics that will help us be better prepared before conducting penetration tests. Preparations before a penetration test can often take a lot of time and effort, and this module shows how to prepare efficiently.

40.91% Completed

Penetration Testing Process

15 Sections

Fundamental

General

This module teaches the penetration testing process broken down into each stage and discussed in detail. We will cover many aspects of the role of a penetration tester during a penetration test, explained and illustrated with detailed examples. The module also covers pre-engagement steps like the criteria for establishing a contract with a client for a penetration testing engagement.

100% Completed

Cross-Site Scripting (XSS)

10 Sections

Easy

Offensive

Cross-Site Scripting (XSS) vulnerabilities are among the most common web application vulnerabilities. An XSS vulnerability may allow an attacker to execute arbitrary JavaScript code within the target's browser and result in complete web application compromise if chained together with other vulnerabilities. This module will teach you how to identify XSS vulnerabilities and exploit them.

100% Completed

Command Injections

12 Sections

Medium

Offensive

Command injection vulnerabilities can be leveraged to compromise a hosting server and its entire network. This module will teach you how to identify and exploit command injection vulnerabilities and how to use various filter bypassing techniques to avoid security mitigations.

100% Completed

Using Web Proxies

15 Sections

Easy

Offensive

Web application penetration testing frameworks are an essential part of any web penetration test. This module will teach you two of the best frameworks: Burp Suite and OWASP ZAP.

100% Completed

Footprinting

21 Sections

Medium

Offensive

This module covers techniques for footprinting the most commonly used services in almost all enterprise and business IT infrastructures. Footprinting is an essential phase of any penetration test or security audit to identify and prevent information disclosure. Using this process, we examine the individual services and attempt to obtain as much information from them as possible.

4.76% Completed

File Upload Attacks

11 Sections

Medium

Offensive

Arbitrary file uploads are among the most critical web vulnerabilities. These flaws enable attackers to upload malicious files, execute arbitrary commands on the back-end server, and even take control over the entire server and all web applications hosted on it and potentially gain access to sensitive data or cause a service disruption.

100% Completed

Information Gathering - Web Edition

19 Sections

Easy

Offensive

This module equips learners with essential web reconnaissance skills, crucial for ethical hacking and penetration testing. It explores both active and passive techniques, including DNS enumeration, web crawling, analysis of web archives and HTTP headers, and fingerprinting web technologies.

100% Completed

Server-side Attacks

19 Sections

Medium

Offensive

A backend that handles user-supplied input insecurely can lead to devastating security vulnerabilities such as sensitive information disclosure and remote code execution. This module covers how to identify and exploit server-side bugs, including Server-Side Request Forgery (SSRF), Server-Side Template Injection (SSTI), and Server-Side Includes (SSI) injection attacks.

100% Completed

Incident Handling Process

11 Sections

Easy

General

Security Incident handling has become a vital part of every organization's defensive strategy, as attacks constantly evolve and successful compromises are becoming a daily occurrence. In this module, we will review the process of handling an incident from the very early stage of detecting a suspicious event to confirming a compromise and responding to it.

81.82% Completed

MacOS Fundamentals

11 Sections

Fundamental

General

This module covers the fundamentals required to work comfortably within the macOS operating system and shell.

100% Completed

Windows Attacks & Defense

16 Sections

Medium

Purple

Microsoft Active Directory (AD) has been, for the past 20+ years, the leading enterprise domain management suite, providing identity and access management, centralized domain administration, authentication, and much more. Throughout those years, the more integrated our applications and data have become with AD, the more exposed to a large-scale compromise we have become. In this module, we will walk through the most commonly abused and fruitful attacks against Active Directory environments that allow threat actors to perform horizontal and vertical privilege escalations in addition to lateral movement. One of the module's core goals is to showcase prevention and detection methods against the covered Active Directory attacks.

100% Completed

Security Monitoring & SIEM

Fundamentals

11 Sections

Easy

Defensive

This module provides a concise yet comprehensive overview of Security Information and Event Management (SIEM) and the Elastic Stack. It demystifies the essential workings of a Security Operation Center (SOC), explores the application of the MITRE ATT&CK framework within SOCs, and introduces SIEM (KQL) query development. With a focus on practical skills, students will learn how to develop SIEM use cases and visualizations using the Elastic Stack.

100% Completed

Introduction to Threat Hunting & Hunting With Elastic

6 Sections

Medium

Defensive

This module initially lays the groundwork for understanding Threat Hunting, ranging from its basic definition, to the structure of a threat hunting team. The module also dives into the threat hunting process, highlighting the interrelationships between threat hunting, risk assessment, and incident handling. Furthermore, the module elucidates the fundamentals of Cyber Threat Intelligence (CTI). It expands on the different types of threat intelligence and offers guidance on effectively interpreting a threat intelligence report. Finally, the module puts theory into practice, showcasing how to conduct threat hunting using the Elastic stack. This practical segment uses real-world logs to provide learners with hands-on experience.

100% Completed

Windows Event Logs & Finding Evil

6 Sections

Medium

Defensive

This module covers the exploration of Windows Event Logs and their significance in uncovering suspicious activities. Throughout the course, we delve into the anatomy of Windows Event Logs and highlight the logs that hold the most valuable information for investigations. The module also focuses on utilizing Sysmon and Event Logs for detecting and analyzing malicious behavior. Additionally, we delve into Event Tracing for Windows (ETW), explaining its architecture and components, and provide ETW-based detection examples. To streamline the analysis process, we introduce the powerful Get-WinEvent cmdlet.

100% Completed

Understanding Log Sources & Investigating with Splunk

6 Sections

Medium

Defensive

This module provides a comprehensive introduction to Splunk, focusing on its architecture and the creation of effective detection-related SPL (Search Processing Language) searches. We will learn to investigate with Splunk as a SIEM tool and develop TTP-driven and analytics-driven SPL searches for enhanced threat detection and response. Through hands-on exercises, we will learn to identify and understand the ingested data and available fields within Splunk. We will also gain practical experience in leveraging Splunk's powerful features for security monitoring and incident investigation.

100% Completed

Working with IDS/IPS

11 Sections

Medium

Defensive

This module offers an in-depth exploration of Suricata, Snort, and Zeek, covering both rule development and intrusion detection. We'll guide you through signature-based and analytics-based rule development, and you'll learn to tackle encrypted traffic. The module features numerous hands-on examples, focusing on the detection of prevalent malware such as PowerShell Empire, Covenant, Sliver, Cerber, Dridex, Ursnif, and Patchwork. We also dive into detecting attacking techniques like DNS exfiltration, TLS/HTTP Exfiltration, PsExec lateral movement, and beaconing through IDS/IPS.

100% Completed

Introduction to Malware Analysis

9 Sections

Hard

Defensive

This module offers an exploration of malware analysis, specifically targeting Windows-based threats. The module covers Static Analysis utilizing Linux and Windows tools, Malware Unpacking, Dynamic Analysis (including malware traffic analysis), Reverse Engineering for Code Analysis, and Debugging using x64dbg. Real-world malware examples such as WannaCry, DoomJuice, BrbBot, Dharma, and Meterpreter are analyzed to provide practical experience.

100% Completed

Intermediate Network Traffic Analysis

18 Sections

Easy

Defensive

Through network traffic analysis, this module sharpens skills in detecting link layer attacks such as ARP anomalies and rogue access points, identifying network abnormalities like IP spoofing and TCP handshake irregularities, and uncovering application layer threats from web-based vulnerabilities to peculiar DNS activities.

100% Completed

Detecting Windows Attacks with Splunk

23 Sections

Medium

Defensive

This Hack The Box Academy module is focused on pinpointing attacks on Windows and Active Directory. Utilizing Splunk as the cornerstone for investigation, this training will arm participants with the expertise to adeptly identify Windows-based threats leveraging Windows Event Logs and Zeek network logs. Furthermore, participants will benefit from actual PCAP files associated with the discussed Windows and Active Directory attacks, enhancing their understanding of the respective attack patterns and techniques.

100% Completed

YARA & Sigma for SOC Analysts

11 Sections

Easy

Defensive

This Hack The Box Academy module covers how to create YARA rules both manually and automatically and apply them to hunt threats on disk, live processes, memory, and online databases. Then, the module switches gears to Sigma rules covering how to build Sigma rules, translate them into SIEM queries using "sigmac", and hunt threats in both event logs and SIEM solutions. It's all hands-on, using real-world malware and techniques.

100% Completed

Introduction to Digital Forensics

8 Sections

Medium

Defensive

Dive into Windows digital forensics with Hack The Box Academy's "Introduction to Digital Forensics" module. Gain mastery over core forensic concepts and tools such as FTK Imager, KAPE, Velociraptor, and Volatility. Dive deep into memory forensics, disk image analysis, and rapid triaging procedures. Learn to construct timelines from MFT, USN Journals, and Windows event logs while getting hands-on with key artifacts like MFT, USN Journal, Registry Hives, Prefetch Files, ShimCache, Amcache, BAM, and SRUM data.

100% Completed

Security Incident Reporting

5 Sections

Easy

General

Tailored to provide a holistic understanding, this Hack The Box Academy module ensures participants are adept at identifying, categorizing, and documenting security incidents with utmost accuracy and professionalism. The module meticulously breaks down the elements of a robust incident report and then presents participants with a real-world incident report, offering practical insights into the application of the concepts discussed.

100% Completed

Intro to Whitebox Pentesting

18 Sections

Hard

Offensive

Whitebox penetration testing enables thorough testing to identify various hard-to-find vulnerabilities. This module covers the process of whitebox pentesting and follows that with a practical demo by exploiting an advanced code injection vulnerability.

66.67% Completed

Web Fuzzing

12 Sections

Easy

Offensive

In this module, we explore the essential techniques and tools for fuzzing web applications, an essential practice in cybersecurity for identifying hidden vulnerabilities and strengthening web application security.

100% Completed

Network Foundations

12 Sections

Fundamental

General

This course introduces the basic concepts essential to understanding the world of networking. Students will learn about various network types such as LANs and WANs, discuss fundamental networking principles including the OSI and TCP/IP models, and explore key network components like routers and servers. The course also covers important topics such as IP addressing, network security, and internet architecture, providing a comprehensive overview of networking that is crucial for any IT professional.

100% Completed

Public Key Infrastructure

6 Sections

Easy

Defensive

Public Key Infrastructure (PKI) is fundamental to ensuring secure electronic communications and transactions across networks. This module offers a comprehensive introduction to PKI, guiding learners through its core components, including digital certificates, certificate authorities, and the role of encryption in maintaining security. Through a series of well-structured tutorials, learners will gain a deep understanding of how PKI functions within different infrastructures and the best practices for implementation and management. Whether you are new to the field of cybersecurity or seeking to solidify your understanding of PKI, this module caters to all levels. Learners will navigate through theoretical foundations as well as practical applications, ensuring a well-rounded grasp of the subject. With real-world examples, detailed explanations, and hands-on exercises, you'll leave equipped with the confidence to apply PKI concepts effectively in your professional environments.

100% Completed

Identifying Threats and Malicious Software

9 Sections **Easy** Defensive

Dive into real-world cybersecurity scenarios with the "Identifying Threats and Malicious Software" module. This module focuses on helping learners recognize various types of threats, malware, and attack techniques used by adversaries. You'll develop practical skills in detecting and analyzing malicious activity within networks and systems. Perfect for those preparing for security certifications or working in blue team roles, this course provides a solid foundation in threat identification and malware behavior.

100% Completed

Hardening Strategies for Security+

7 Sections **Easy** Defensive

Strengthen your cybersecurity expertise with our "Hardening Strategies for Security+" module. This comprehensive tutorial covers essential techniques for securing systems and networks against potential threats.

100% Completed

Implementing Host-Based Security

9 Sections **Easy** Defensive

In our "Implementing Host-Based Security" module, you'll explore the essential practices and techniques crucial for protecting individual computer systems from internal and external threats. This module delves into the foundational concepts of host-based security mechanisms, such as antivirus software, firewalls, and intrusion detection systems. Through a blend of interactive tutorials and real-world examples, you'll gain practical skills in configuring and managing security protocols to safeguard data integrity and system availability. Whether you're new to cybersecurity or looking to strengthen your defensive strategies, this module offers a deep dive into the key aspects of host-based security. By the end of the module, you will have the confidence and expertise to implement robust security measures, identify potential vulnerabilities, and respond proactively to any incidents that arise.

100% Completed

Wireless Security

7 Sections

Medium

Defensive

In today's digital age, the need for robust wireless security is paramount. This module offers an in-depth exploration of wireless security principles and practices. You'll gain insights into the tools and techniques necessary to protect wireless networks against potential threats. Through engaging tutorials, you'll learn how to identify vulnerabilities, implement secure configurations, and maintain strong defenses against unauthorized access. Ideal for beginners and professionals, this module will equip you with the essential knowledge to safeguard any wireless environment.

100% Completed

Application Security for Security+

7 Sections

Easy

Defensive

Application Security for Security+ is meticulously designed for individuals aiming to deepen their understanding of application security within the context of the Security+ certification. This module provides detailed tutorials that cover key security concepts, threat mitigation techniques, and best practices to protect software applications from current and emerging threats. With expert guidance and real-world scenarios, learners will gain practical insights into implementing secure coding practices and understanding the software development lifecycle. Whether you are preparing for the Security+ exam or looking to solidify your grasp of application security principles, this module serves as a valuable resource. Equipped with interactive sections and hands-on simulations, participants will explore topics such as secure software design, vulnerability management, and code analysis.

100% Completed

Virtualization and Cloud Security

6 Sections

Easy

Defensive

As organizations increasingly rely on virtual environments and cloud-based solutions, understanding the fundamentals of virtualization and cloud security has become critical. This module is designed to equip learners with the knowledge and skills necessary to navigate and secure virtualized infrastructures and cloud platforms effectively. Through a series of engaging tutorials, participants will delve into key concepts, explore industry-standard practices, and analyze real-world scenarios to fortify their virtual environments against emerging threats. Whether you're starting your journey in IT security or looking to deepen your understanding, this module offers a robust foundation in virtualization and cloud security strategies.

100% Completed

Monitoring and Auditing

7 Sections **Hard** Defensive

In the ever-evolving landscape of cybersecurity, understanding the intricacies of monitoring and auditing is crucial for maintaining robust security protocols. This module provides a comprehensive exploration of monitoring and auditing processes, equipping you with the knowledge to effectively oversee and assess information systems for potential threats.

100% Completed

Introduction to Security+

4 Sections **Easy** General

Our "Introduction to Security+" module is tailored to help you effectively prepare for the CompTIA Security+ certification exam. Designed with a blend of theoretical knowledge and practical application, this module covers all exam domains, including network security, compliance, threats and vulnerabilities, access management, and more. Through in-depth tutorials, you'll gain an understanding of key security principles and the confidence needed to tackle exam questions. This module provides a structured learning path, offering study materials, practice exercises, and mock exams that mirror the actual CompTIA Security+ exam format. Whether you're starting your IT career or seeking to validate your skills with a globally recognized certification, this module will provide the tools and guidance you need to succeed

100% Completed

Understanding Types of Attacks

8 Sections **Easy** Defensive

The "Understanding Types of Attacks" module on LetsDefend is designed to help learners grasp the fundamental threats in cybersecurity, a crucial part of the CompTIA Security+ certification. This module covers various attack types, providing a strong foundation in identifying and mitigating security risks. Through real-world scenarios and hands-on exercises, learners will develop the skills to recognize attack vectors and understand how cyber adversaries operate. Whether you're an aspiring cybersecurity professional or preparing for the Security+ exam, this module will enhance your ability to defend against modern cyber threats.

100% Completed
